

Research Centre, Faculty of Economics

is organizing a scientific - research seminar
on Thursday, **13th June 2013**, at **12:00 pm**
in the room **P-109** at the **Faculty of Economics Ljubljana**.

Presentation of an article:

“Evaluating probability of default: intelligent agents in managing a multi-model system”

Authors: prof. Miro Gradišar, Ph.D., Faculty of Economics, University of Ljubljana (co-authors: Igor Perko and Samo Bobek, Faculty of Economics and Business, University of Maribor)

“ For the successful probability of default (PD) evaluation with the application of multiple prediction models two issues should be addressed: the accuracy of the analytic models which decreases over time and the evaluation of results which must be presented in a uniform shape. To deal with these two issues, a multi-agent system (MAS) and knowledge management systems (KMS) based process management system is proposed. The proposed system has two goals: to prevent the PD information quality deterioration by active management of analytical processes and to provide a universal access point allowing the simultaneous use of multiple prediction models.”

You can register for the free seminar by phone (01) 58-92-490, or via e-mail: research.seminars@ef.uni-lj.si until Wednesday, 12.06.2013.

Welcome!
